

## Olivier Henry

***Olivier Henry*** gained his PhD in the field of molecular diagnostics from Cranfield University. Before joining the Nanobiotechnology and Bioscience Group he worked for Sphere Medical (Cambridge UK) as a leading scientist in the development of in-vivo electrochemical microsensors for point-of-care monitoring in hospital environment. His main areas of interest lie in the understanding of molecular recognition mechanisms of natural and synthetic receptors, their interfacing with transducers and microfluidic systems at the nanoscale level and the miniaturisation of bioanalytical assays.
